VAC-CON ANSWERS ARE YES BECAUSE OUR FEATURES WERE DESIGNED FOR YOUR SUCCESS

Only a Vac-Con comes fully loaded with features that deliver more power to you at a competitive price. Because when you absolutely need ease of use, relentless performance, rugged durability and uncompromised safety, you should ask yourself... does my machine measure up? So before you choose...make sure you compare.

1

Does your machine have a 3-stage fan?

Our innovative fan design loads faster than any other fan on the market and even vacuums under water.

2

Does your machine have a 2-engine design?

Vac-Con's 2-engine design allows the convenience of truly independent vacuum and water system operation.

3

Does your machine have a hydrostatic blower drive?

Using the Vac-Con chassis engine with hydrostatic drive for the vacuum system is more efficient, less complicated and eliminates the need for cumbersome PTO's, clutches, gearboxes and other couplers.

10

Does your machine come backed by the industry's best parts and service?

With our easy to maintain design we've already reduced your need for replacement parts and service. But, when you need us we're here with our Power Up service program and our world wide dealer network, backed by a \$5 million inventory of ready-to-ship parts and a comprehensive warranty.

4

Does your machine have an hydraulic telescoping boom?

With a Vac-Con, the boom rotates 270° and telescopes up to 10 ft.

9

Does your machine have a Hi-Dump?

Designed to keep you on the job, the Hi-Dump option allows the debris from the body to be emptied directly into 60" containers without having to pull onto ramps, berms, etc. and eliminates wasted trips to the dump site.

8

Does your machine have a standard automatic vacuum breaker?

Vac-Con believes in safety first. That's why features like an automatic vacuum breaker, hydraulic rear door locks and safety interlocks are all part of our standard package.

7

Does your machine have a water pump that can deliver smooth and continuous flow at 3,000 psi?

Vac-Con offers a wide variety of water pumps up to 3,000 psi and 120 gpm. The continuous smooth flow allows the operation of Vac-Con's exclusive Inspector Cam and the Hydro-Excavation Package.

6

Does your machine's design resist wear and tear?

Armed with Corten® steel compressor fans and debris tank and cross-linked polyethylene water tanks, this machine is built for rough and tough conditions.

5

Does your machine ensure easy operation?

Ours does. With all controls at a single station, the operator can stay on the job without wasted motions. Simply park, set the brake, access the controls and you're ready to go to work.
